Here is the complete Product Requirements Document (PRD) & Execution Plan for the Multi-College Update. You can use this document yourself and feed the AI prompt section directly to Antigravity to build and deploy everything cleanly.

Multi-College Expansion & Production Build PRD

1. Objectives & Overview

*** Objective: Expand CloneFest 2.0 eligibility from an RVCE-only event to students across all engineering colleges (2025–2029 batch / upcoming 2nd years).**

*** Core Problem: The current codebase enforces strict @rvce.edu.in email validation, RVCE USN regex patterns (1RV25...), and fixed RVCE department dropdowns in both the frontend and Supabase database schema.**

*** Solution: Relax database constraints, update the registration flow to collect college information, clean up build-breaking lint errors, and deploy to Vercel via the repository owner's GitHub account.**

2. Technical Specification & File Checklist

A. Database Migration (supabase/patch_012_multi_college.sql)

*** Add Column: Add college TEXT DEFAULT NULL to the public.profiles table.**

*** Drop Constraints:**

*** Drop profiles_usn_format_check (removes the strict regex constraint).**

*** Drop profiles_branch_check (allows non-RVCE branch names).**

*** Update Sheets Sync: If using the send_profile_to_sheets trigger, ensure the payload accepts the optional college parameter.**

B. Authentication & Registration Flow

*** src/components/auth/LoginForm.jsx:**

*** Remove strict @rvce.edu.in regex domain validation in validateRvceEmail.**

*** Update input placeholder to support standard email formats (e.g., name@example.com or student@college.edu.in).**

*** src/components/hacker/ProfileDetailsForm.jsx:**

*** College Selector: Add a college dropdown (RVCE, BMSCE, MSRIT, PESU, Other).**

*** Dynamic Text Input: If Other is selected, render a text input for the user to type their custom college name.**

*** Student ID / USN Field: Rename label from "USN" to "Student ID / USN". Remove the /^1R[VZ]25[A-Z]{2}\d{3}$/ regex validation.**

*** Branch Field: Replace the fixed branch dropdown with a free-text input.**

*** Supabase Payload: Include college in the profile update query.**

*** Batch Disclaimer: Add the following note directly above the submit button:**

> "Eligibility Notice: This event is strictly for the 2025–2029 batch (upcoming 2nd years). All finalists and prize winners will be required to present a valid physical College ID or portal proof during final evaluation. Ineligible entries will be disqualified."

>

C. Admin & Data Visibility

*** src/pages/AdminPortal.jsx:**

*** Render college in the users and squads list tables (falling back to "RVCE" or "—" if college is null).**

*** Ensure the CSV export function includes the college column.**

D. ESLint & Vercel Build Blocker Cleanup

To prevent Vercel CI/CD build failures, remove all dead code and unused imports:

*** src/components/hacker/TrackGrid.jsx: Remove unused CountdownBanner and DifficultyChip imports.**

*** src/pages/AdminPortal.jsx: Remove unused EMAIL variable.**

*** src/pages/TeamDetails.jsx: Remove unused handleToggleListing variable/function.**

*** src/pages/JudgePortal.jsx: Remove unused late variable.**

3. Step-by-Step Execution Workflow

[Step 1: Database] -> Run patch_012_multi_college.sql in Supabase SQL Editor

[Step 2: Antigravity]-> Run the AI Agent prompt to update code & clear ESLint errors

[Step 3: Local Test] -> Run `npm run build` locally to confirm exit code 0

[Step 4: Deploy] -> Run `git add .`, `git commit`, and `git push origin main`

4. Antigravity Prompt (Copy-Paste Ready)

Copy and paste this prompt directly into a new Antigravity session to apply the changes across the codebase:

Please implement the Multi-College Registration update and fix all Vercel ESLint build blockers according to this specification.

CRITICAL SAFEGUARDS:

1. Do NOT delete or modify existing user data handling.

2. Ensure backward compatibility (existing users with null college must not encounter errors).

3. Ensure `npm run build` exits with code 0.

Tasks to execute:

1. Auth Form (src/components/auth/LoginForm.jsx):

- Remove strict @rvce.edu.in domain validation. Allow standard valid email formats.

- Update placeholder text to a generic email example.

2. Onboarding Form (src/components/hacker/ProfileDetailsForm.jsx):

- Add a "College" select dropdown containing: "RV College of Engineering (RVCE)", "BMS College of Engineering (BMSCE)", "Ramaiah Institute of Technology (MSRIT)", "PES University (PESU)", and "Other".

- If "Other" is selected, render a text input for manual college entry.

- Rename "USN" label to "Student ID / USN" and remove the RVCE regex validation.

- Change the "Branch" selector to a clean text input.

- Update the Supabase profile update call to persist `college`.

- Add an eligibility disclaimer text directly above the submit button:

"Eligibility Notice: This event is strictly for the 2025–2029 batch (upcoming 2nd years). All finalists and prize winners will be required to present a valid physical College ID or portal proof during final evaluation. Ineligible entries will be disqualified."

3. Admin Portal (src/pages/AdminPortal.jsx):

- Display `college` in the participant/squad registry table (handling null values gracefully).

- Include `college` in the CSV export utility.

4. Clear ESLint Build Blockers:

- src/components/hacker/TrackGrid.jsx: Remove unused `CountdownBanner` and `DifficultyChip`.

- src/pages/AdminPortal.jsx: Remove unused `EMAIL` reference.

- src/pages/TeamDetails.jsx: Remove unused `handleToggleListing`.

- src/pages/JudgePortal.jsx: Remove unused `late` variable.

Run `npm run build` after completing these edits and verify there are zero build errors.

5. SQL Patch Reference (patch_012_multi_college.sql)

Run this SQL block directly in your Supabase SQL Editor:

```
-- 1. Add college column to profiles
ALTER TABLE public.profiles
ADD COLUMN IF NOT EXISTS college TEXT DEFAULT NULL;

-- 2. Drop legacy format and branch check constraints
ALTER TABLE public.profiles
DROP CONSTRAINT IF EXISTS profiles_usn_format_check;

ALTER TABLE public.profiles
DROP CONSTRAINT IF EXISTS profiles_branch_check;
```

6. Final Deployment Commands (Terminal)

Once the Supabase query has run and the local build succeeds:

```
# Verify build passes
npm run build

# Stage and push to GitHub (triggers Vercel deployment)
git add .
git commit -m "feat: complete multi-college registration rollout and fix build blockers"
git push origin main
```
